Summary for Policy Makers

Green Energy Choices: The Benefits, Risks and Trade-Offs of Low-Carbon Technologies for Electricity Production

Apologies to those of you who have downloaded the summary for policy makers before March 31, 2016. The following changes were made in the PDF and printed versions of the summary for policy makers:

- In the caption of Figure 1, “reflecting application of the technology in Europe” was added.
- The caption of Figure 2 was changed from “Human health impact in disability adjusted life years (DALY) per unit of electricity generated (1kWh)” to “Human health impact in disability adjusted life years (DALY) per 1TWh of electricity generated, for Europe 2010.”
- The caption of Figure 3 was changed from “Ecosystem impacts in species-year affected per TWh of electricity following different damage pathways” to “Ecosystem impacts in species-year affected per 1000 TWh of electricity following different damage pathways, reflecting Europe 2010.”
- Editorial changes were made to the caption of Figure 6.
- Figure 7 reflected impacts in Europe but was normalized with the global electricity mix. It was replaced by a figure that reflects global-average impacts of the displayed technologies.
- Footnotes 12, 20, 23, 26, 28 were added.
- The referencing of sources in footnotes 17, 18, 19 (now 18, 19, 20) were corrected.
- References to Cancun Climate Summit on p. 2, 4 and 39 were updated with the references to the Paris Agreement on climate change.
